The principal for this tutorial is to learn to create and convert 2D drawings into 3D geometry. I will be working on 2D (flat) drawings for this tutorial. Prerequisite: Microsoft Windows 8 and Microsoft Visual Studio 2015 Community edition or better is required to install the Autodesk Project 2013 software. Once you have the installed Autodesk Project 2013 software, you can proceed with this tutorial. We are using the New Project dialog box. Once the New Project dialog box is opened, select File -> New -> Project -> Project from existing code. Next we need to select a data type for the project. We can select a different data type to work with the existing code, or we can create a new project from scratch. The difference between the two is that we will not be editing the existing code. A new project can be a fresh start. The first step is to choose which coding language will be used for this tutorial. Now you can click the OK button to get started with the New Project dialog box. I will be using C++ as the coding language for this tutorial. I will be working on a flat project for this tutorial. The New Project dialog box will have a tab called Visual C++ and then click the OK button to open the C++ New Project dialog box. After the new project is created, the project folder will have an open icon in it. The project folder can be used as a reference. Double-click the icon to open the new project. It is now time to add the required files to the new project. The first thing to add is the header and source files for the project. To add a header file to the project, right-click the project and select Add -> New Item. In the Files of type dialog box, select Header File. In the Project properties dialog box, the name of the header file can be changed. Next, add the.cpp files for the project. To add a cpp file to the project, right-click the project and select Add -> New Item. In the Files of type dialog box, select Source File. In the Project properties dialog box, the name of the source file can be changed. If you go back to the New Project dialog box, you can change the file type and name for the header files and source files for the project. In my case, I

Features Interoperability Like its commercial counterpart AutoCAD, AutoCAD LT's native programming language is AutoLisp. AutoLisp programs and AutoCAD scripts are interchangeable (AutoCAD LT's native programming language is similar to AutoCAD, so this would be true for native AutoCAD programs, too). The new AutoLisp 6 is a new, object-oriented, dynamic, event-driven, general-purpose programming language that supports modularity and extensibility. AutoLisp 6 is a better fit for programmer productivity and is more amenable for rapid development of applications. A driver can be developed for any AutoLisp engine in any programming environment, which is similar to Microsoft COM and Apple OpenDoc. AutoLisp does not need to be installed in order to use AutoLisp programs. AutoLisp programs can communicate with any other AutoLisp program or AutoCAD script. AutoLisp and AutoCAD are compatible in order to import and export their native data types. AutoLisp can integrate with AutoCAD, and AutoCAD can integrate with AutoLisp. It is possible to create AutoCAD applications using a scripting language other than AutoLisp. For example, it is possible to create AutoCAD applications using Visual Basic, Visual Basic.NET, Visual C++, Delphi, or Java. A number of proprietary add-ons to AutoCAD LT are available from Autodesk. These add-ons include: RepRap RoyalBlue Autocad Architecture Autocad Electrical Autocad Building Design Autocad Utility Autocad Animation AutoCAD Gallery AutoCAD Foundation Autocad Solutions Automate 360 Automate AutoCAD Composer AutoCAD Tree AutoCAD Genetics AutoCAD by Genesys AutoCAD Advantage Third-party add-ons, called "plugins" in AutoLisp, can also be developed for AutoCAD. One example of a third-party AutoCAD plugin is the Autodesk Exchange AutoCAD add-on. There are over 16,000 third-party plugins available on Autodesk Exchange Apps, including solutions for Architects, Civil Engineers, MEP Engineers, Land Surveyors, Landscape Architects, Mechanical Engineers, Planners, Structural Engineers a1d647c40b
