I have been using a top roping device for about the past 3 months and it worked so well when climbing that I think I will never use a top rope to belay again (at least not by the same person). I was also wondering about the duration of a crampon's ice engagement? I have a set of Schwalbe Marathon Plus 700 RC which are the only crampons I own, and they are supposedly quite ice proof. I have had a few blades hit on the sole, yet no problem. However, I do not know how they work. Will these crampons simply plough on into ice and then somehow 'grab' into the ice like some guns do?
