aMule is a peer-to-peer file sharing program that can be used to download and upload files directly to people all over the world. Files can be exchanged through a large network of servers, or directly between two computers without going through a central server. The software can be installed and used on Windows, Mac, Linux, BSD, or DOS. In order to prevent any data loss, files are always transferred in secure mode. aMule allows you to share or upload any type of files, including pictures, movies, documents, and songs, on a worldwide network of servers. Files are exchanged by direct connection between two computers. This kind of file sharing is called Direct Connect, since the connection between computers is direct and not through a central server. aMule Installation: This is a very easy process and one that doesn't require much of a command line. This is why it's one of the most popular programs. Simply double click on the executable file (usually named 'amule'), and wait for it to finish the installation. Now launch the application and you're ready to go. You can also run it from the command line by typing 'amule' into the terminal. Main Features: There are many features found in aMule. Some are more useful than others and it's up to you to decide which ones are the most important. Since this is such a popular application, aMule comes packed with a lot of useful features. If you're new to aMule, it's best to check the 'options' link for a detailed list of the main features found in the program. Some of the more popular features include: - The ability to upload and download files directly from the program - Many ways to search for the desired files - The ability to organize your files and directories - The ability to transfer files in different formats, including movies, music, and documents - The ability to send and receive attachments with e-mails - The ability to connect to multiple servers - The ability to create offline files - The ability to delete files remotely - The ability to send files by fax - The ability to create your own private server - The ability to manage your accounts remotely - The ability to set a download limit for yourself - The ability to create groups and communicate with them - The ability to set up, test, and view your ports - The ability to delete your own servers remotely - The ability to manage

What's New In AMule?

aMule is an eMule like alternative that aims to fill the gap in the market of the applications that are not quite eMule like. Its main advantages are that it is small, fast, secure and, above all, free. aMule allows you to connect to any fast and free peer to peer network, like eMule. Also it allows to automatically search for other like minded users, to search for shared files, to upload files, and to download files. A good advantage of aMule over eMule is that it is completely Open Source (GNU GPL). On the other hand, aMule does not have any server and it is not indexed by web search engines. It is also not as user friendly as eMule. Key Features: * Find others on the Internet (Search by ip, email, username, nickname, etc.) * Search for files or folders to share * Download files from remote hosts * Upload files to remote hosts * Download hosts (specify the download priority) * Upload hosts (specify the upload priority) * Remote Control via the Configuration utility * Remote Control via the Notification utility * Network monitor, including bandwidth and disk space usage * Shutdown remote hosts * Support for multiple networks and multiple themes * Support for multiple servers * Support for multiple protocols and multiple ports * Support for multiple filesizes and multiple recursions * Support for Zlib, AES, LZO compression * Cookies support * Proxy support * Upload queue support * TLS/SSL support * Configuration utility * Status dialog * Queue list * Queue status * Queue statistics * Password protection * BitTorrent support * eDonkey support * Azureus support * Direct Connect support * DHT support * UPnP support * No server * No server upgrade * DNS Resolver * Customizable list of search engine addresses * IPv6 support * BitTorrent Chaining * Cross-platform support * System tray * TLS/SSL Certificate, CA Certificate and Private Key support * Multilingual support * Fast search * IPv6 search * PNG, GIF, JPG, BMP, TIFF, WBMP, EMF, PCX, EPS, PSD, PDF, SVG support * Animated GIF support * Animated GIF download * MP3 support * MP3 download * MP3 upload * Zim support * FTP support * SFTP support * FTPS support * HTTP proxy support * FTP proxy support * MySQL support * PostgreSQL support * Interbase support * ODBC support * Oracle support * ODBC Downloader * Oracle Uploader * LDAP support * Active Directory support * Windows/Winamp playlists support
